political history of Pontiac would stamped linens. Mrs. D. S. Kelley be led to imagine that a candidate who proclaims himself a straighti Independent in this county is something of a curiosity, were he A Box Social will be held at Mr. and Mrs. James H. Horner, able anywhere. himself a straight Independent. supply boxes. Again in 1892, the late Hector Mc-Lean ran as a straight Independent, in deference to the wishes of some people who pretended to be friends, but immediately knifed him when they got the opportunity. Some years later, the first time Mr. Gillies was elected by acclamation, it was due to the fact that he agreed to give the Flynn government (if returned to power) an independent support. Independence is certainly not new in Pontiac, and some who are now speaking contemptuously of Mr. Bastien, were among the most ardent and zealous supporters of the gentlemen named when they ran as Independents.

#### Pte. Amy Returns.

Pte. E. G. Amy, a former resident of Shawville, was among the arrivals on Friday evening last, and all old friends were glad to see him looking so well, after the ordeal he has gone through in doing his bit at the front. Whilst now in the enjoyment of good health, Ernest bears the evidences of the tremendous conflict in which he took part, first in Belgium, then at the Somme, where he was first wounded, and latterly at the gallant capture of Vimy Ridge, where he was permanently disabled by having his right foot smashed by shell explosion. Following that misfortune he was sent back to England, where he has since remained up to the time he sailed for Canada, meantime, however, taking occasion to visit his parents on the Island of Jersey.

Pte Amy went overseas in March. 1916, with the 45th Battalion, of Brandon. Arriving in England he was drafted into the 44th Battalion, and in June crossed over to Belgium where he remained six months. Subsequently he took part in the campaign on the Somme, and finally wound up at Vimy, as already stated. He says form any idea of the awful desolation and ruin which prevails throughout the battle-scarred region occupied by the contending armies.

#### HELP VICTORY LOAN BY PAYING YOUR BILLS

There are thousands of retail merchants and tradespeople thro'out Canada, especially in the smaller towns and yillages, who would gladly subscribe, or subscribe more, for Victory Bonds, if it were not for the amount of money they are carrying on their books and the uncertainty as to when much of it will be paid. The farmers who deal with these local merchants and traders are not the least blameable in this respect, for they are apt to let their accounts run until convenient to pay them, while the merchant, knowing that payment ultimately is certain, is unwilling to press them.

If everyone during the last week of the campaign would make an effort to pay his bill to the local merchant or tradesman, the latter would be glad to increase their Victory Loan subscriptions. Thousands of farmers have received substantial sums of money for their produce and are able to pay their accounts before December 1st just as well as afterwards. If you are one of them, see that you pay up during the last week in November and thus give your merchant the opportunity he no doubt desires to subscribe for all the Victory Bonds that he possibly can, and do not forget to subscribe yourself to the utmost of your power. Patriotism demands it and so does self interest for only by a heavy over-subscription of the Victory Bond issue can the prosperity of the farmers, the retailers and all other classes of Canada's population be assured.

on the good eggs in the incubator that a decayed apple would have in the midst of good ones. They throw off a poisonous gas which is responsible for many chicks being dead in the Weak chicks are caused by the same shell at hatching time. This also

At hatching time, I take the chicks lightly, but never allowing them to get hot enough to sweat, which is always fatal. I am very careful about letting cold air into the incubator, as chills the unhatched chicks.

In about forty-eight hours I feed cracker-crumbs or bread-crumbs, placthem all the time.

Infertile eggs in the tray do not

### MAKING BUTCHERING EASIER

Methods That Take the Drudgery Out of Hog-Killing Time. By Mrs. L. E. Armour.

When we butcher hogs we prefer a ter the second time. before it is finished. A small amount saltpeter will keep it. of lime added to the scalding water will not injure the meat in any way, and it makes the hair slip much more easily and the skin is whiter.

The carcasses are pulled from the scalding barrell and put on a long platform which is a little lower at the end farthest from the barrel. This lowering of one end gives the water a chance to drain off, and the hair and seurf is more easily cleaned from the platform. The best procedure in removing the hair is to begin on the head and feet. These are the hardest to dress properly, and when they become cold they are an almost impossible task.

Avoid Heavy Lifting

which is used as an inclined plane. A per, and sage. Store in a deep pan tied to the lower pulley. If a pair of vinegar, as desired. Liver cheese is pulley-wire stretchers are handy, they made in the same way, using three are the best, as they have a patent livers, one head, and eight feet. grip that holds the hog securely at any height. Now we are ready to dash cold water over the body.

We remove the entrails next, being very careful all the while that they be drawn intact. We place a stick between the ribs to hold the sides apart rinse out with cold water, and we continue with the others until they have been brought to the state of the one described.

It is time to begin cutting and trim ming the first when the last hog is dressed. Hams, sides, and shoulders are trimmed to the desired size and carried to the smokehouse, where we spread them singly on shelves and sprinkle them with salt. Heads are soaked in water to remove the blood and handled in the same manner.

Skins should be cut from the pieces that are to be used for lard, and all lean taken off for the sausage. The skins are cooked alone. The lard fat is cut into small pieces and the sau-

The carcass dried a while, and after the drying we ]; is rolled from the platform on to a pack it away in crocks and cover with strong chair. Two men can carry a lard. Mixed sausage is made by alvery heavy hog in this manner. The lowing one pound of lean beef and one

To Prepare Livers

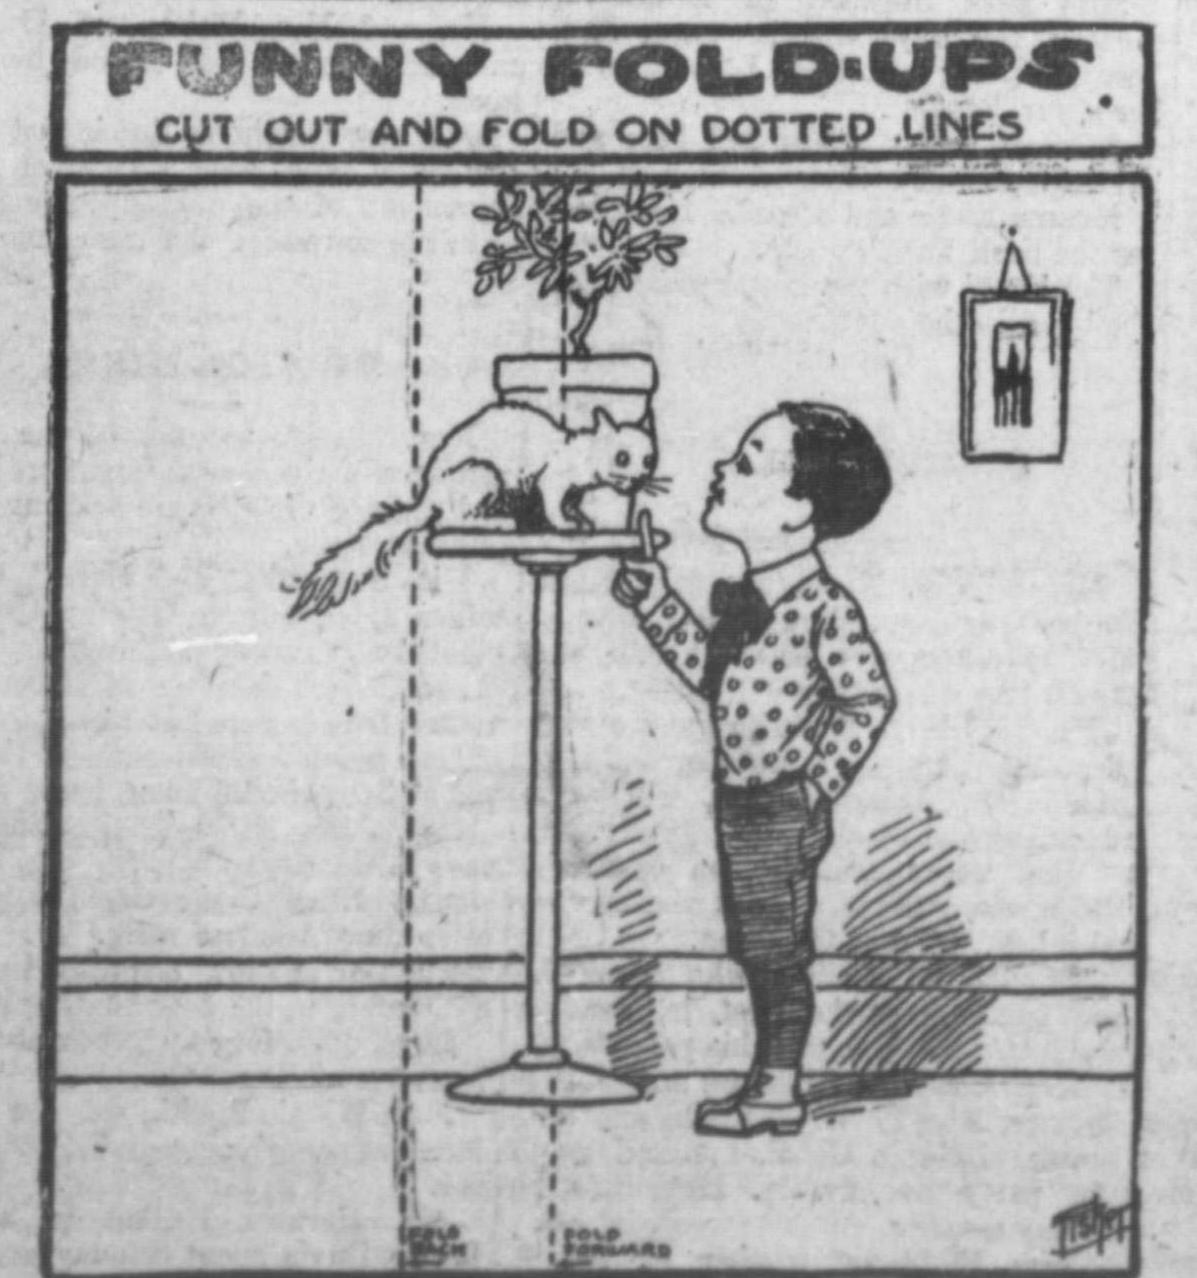

At butchering time there is so much fresh meat and "bones" that we seldom eat all of the livers. The French in Louisiana have the following way of taking care of it, and it is an extremely appetizing food when rightly prepared and served: Cook as many livers as desired, boiling until perfectly tender. Mash well, add salt, pepper, sage, minced onions, or garlic much rice that has been thoroughly cooked and seasoned. Stuff it in well-cleaned paunches and hang to dry. It should be smoked a little with cobs or hickory wood. After the smoking operation it is sliced and

Backbones and ribs, if unsalted, can be hung in the smokehouse in flyproof sacks, and will not taste old for several days. After we have left our meat in the brine from three to five weeks-the colder the weather the longer /e leave it-we smoke it over a hickory fire and pack it in rat-Here is the brine we use for 100 proof receptacles, placing corn husks

Pork Without Corn.

pork, and other feeds may be profit- than now existing. ably substituted for corn. Their use nust be determined by their availability, cost per pound and relative feeding value. Crushed oats can be substituted for corn to the extent of two-thirds of the ration, when the cost per pound is two-fifths less than that of corn. Barley will take the place of corn altogether when the cost is the same per pound. Rye, at nine-tenths the cost of corn, and frosted wheat at the same price, will take the place of corn. When ground and fed as a meal, the grain sorghums will displace corn in the ration if a trifle lower in price. The same is true of millet when one-fourth cheaper, hominy feed hen one and one-seventh the price of corn, and wheat shorts when one and one-tenth the price of corn per pound. Millet can not be fed alone, but with a protein supplement. Rice bran can be used when one-tenth cheaper than corn, no protein being needed. Barley feed, which has about the same feeding value as a mixture of wheat bran and shorts, can replace corn-meal when costing the came. Millet, cull beans and rice bran tend to produce soft pork if fed too extensively.

To stop leakage through concrete, such as tunnel walls, clean the wall thoroughly and paint with a solution consisting of eight and three-quarter pounds of zine sulphate dissolved in a gallon of water. The zinc sulphate will act on the lime in the cement, forming insoluble calcium sulphate and zinc hydroxide, which fills up the pores in the concrete.

The stockman who, in a panic, sells out at this time will not only lose money on the disposal of farm roughages, but will lose in soil fertility and will eventually be compelled to re-Corn is not absolutely essential for stock at prices as high, or higher

SYNOPSISOF CANADIAN NORTH WEST LAND RECULATIONS

Charles Control

The sole head of a family, or any male over 18 years old, who was at the commencement of the present war, and has since continued to be, a British subject or a subject of an allied or neutral country, may homestead a quarter section of available Dominion Land in Manitoba, Saskatchewan or Alberta. Applicant must appear in person at Dominion Lands Agency or Sub-Agency for District. Entry by proxy must be made on certain conditions. Duties-Six months residence upon and cultivation of land in each of three years.

In certain districts a homesteader may secure an adjoining quarter section as pre-emption. Price \$3.00 per acre. Duties-Reside six months in each of three years after earning homestead patent and cultivate 50 acres extra. May obtain pre-emption patent as soon as homestead patent on certain conditions.

A settler after obtaining homestead patent, if he cannot secure a pre-emption, may take a purchased homestead in certain districts. Price \$3.00 per acre. Must reside six months in each of three years, cultivate 50 acres and erect a house worth \$300.00.

Holders of entries must count time of employment as farm labourers in Canada during 1917, as residence duties under certain conditions.

When Dominion Lands are advertised or posted for entry, returned sol diers who have served overseas and have been honorably discharged, receive one. day priority in applying for entry at local Agent's office (but not Sub-Agency). Discharge papers must be presented to Agent.

# Get Behind the Wheel of a Ford and Drive

RY it just once! Ask your friend to let you 'pilot' his car on an open stretch. You'll like it, and will be surprised how easily the I Ford is handled and driven.

If you have never felt the thrill of driving your own car, there is something good in store for you. It is vastly different from just riding-being a passenger. And especially so if you drive a Ford.

Young boys, girls, women and even grandfathers—thousands of them are driving Ford cars and enjoying it. A Ford stops and starts in traffic with exceptional ease and smoothness, while on country roads and hills its strength and power show to advantage.

Buy a Ford and you will want to be behind "the wheel" constantly.

Death worth living in, worth working in, comes only when the spinal cord back worth being proud of, worth fighting to of the brain, is severed. preserve.-John M. Oskison

#### VAMPIRE OF THE OCEAN.

"Ironing" the Devilfish Is a Mode of Flirting With Death.

"Ironing" the devilfish, the largest of all the rays and one of the largest creatures of the sea, means flirting with death. The devilfish is also known as the ocean vampire. Its sciage which in reality is a detached part of the pectoral fin or wing. The horns, sometimes three feet long and freely movable, are used to bring food to its

These fins have been known to circle above the bow of a boat, lifting the vessel out of the water and deluging the occupants of the boat with gallons of water. When they flop back to the surface they make a noise that can be heard far off. Exciting? Dangerous? The sport is both. The only thing that saves devilfish hunters at a time like this is preparedness. Every man must is thrown in the manta is killed.

The devilfish gets its name of manta, meaning blanket, from the pearl divers demands for labor, raising the rate of of the Caribbean sea, who are of the belief that it devours people after enveloping them in its enormous wings.

The fish has prodigious strength and has been known to tow a hundred ton vessel far out to sea. An authenticated story is told of a manta that towed until finally the crews were compelled to cut the rope and let the devilfish

#### Walking in a Circle.

-The reason we cannot always walk in a straight line with our eyes shut is because when we walk naturally the steps taken by our right and left feet are not of equal length. This difference in the length of steps is due to the fact that our legs are never exactly the same length.

We think of them generally as of the same length, but they are not, and this will be proven if you measure them accurately. Now, then, the longer of the legs will always take a longer step than the shorter one, and so if our eyes are shut, we walk in circles, unless we have something to guide us.

When we walk with our eyes open we are able to overcome the difference. but with closed eyes this is impossible except with considerable practice.

Parsley and sweet herbs should be gathered on a sunshiny day when full grown if they are to be dried.

Mayor, Maryland P. O., Que,

#### MOTION PICTURE FILMS.

flow They Are "Edited" Before They Reach the Public Eye.

After a motion picture film has been Jeveloped and printed it is sent to the general manager or to the director to be "edited." Like an author's manuscript in the hands of an editor, it is shortened here and there, the captions altered, some parts entirely "cut" or deleted and the whole film dressed up to suit the ideas of the men closest in

touch with the theater going public. The editing takes place in the projection room, says the Popular Science Monthly, but the altering-cutting the film and changing it-is done in the cutting and assembling room by men who do nothing else. Sometimes the men in the cutting room ("cutters," in the trade lingo) are so overwhelmed and confused with orders issued by the studio officials that they are compelled to ask for additional explanations. Needless to say this wastes much time.

By means of the phonograph, however, one motion picture company is eliminating this waste and saving money. As the director watches a picture in the projection room he utters his editing orders into the transmitter of a dictating machine. The film is then sent back to the cutting room with the phonograph record.

#### A SUBMARINE BASE.

It Is a Supply and Repair Station For Undersea Boats.

What is a "submarine base?" Well, a submarine base is, in a word, a supply and repair station for undersea boats. Craft of this kind are very elaborate and exceedingly delicate pieces of mechanism; they are liable to need tinkering at frequent intervals.

Hence there must be a machine shop on shore at the service of the boats when at intervals they return from cruises. There must also be a storehouse containing all kinds of supplies and spare parts for the submarines. tanks of fuel oil.

Usually there is attached to the base a "mother ship"-a good sized steamer, with machinery aboard for making emergency repairs. The steamer also carries dynamos, which may be used for charging the batteries of the boats -though at sea the charging is accomplished by the oil engines that propel the submarine when on the surface.

When it is not practicable to establish such a shere station the "mother ship" may be utilized temporarily as a floating base.

Curious Land, Curious People. Near Cape Horn, in the islands of Tierra del Fuego, live the most curious people in all South America. It rains or snows or sleets nearly every day, and yet they look on their country as the finest in the world. They wear hardly any clothing and seem not to feel cold. Because he saw fires on the shore the explorer Magellan, the first European that rounded the Horn, called the island "the land of fire," which is almost the worst name he could have chosen. Their buts are made of bent boughs and covered with grass and give only the poorest shelter. The folk a are vain, too, wearing necklaces of the teeth of fishes or seals and painting patterns on their bodies. Among them White is the sign of war and red of peace. They are great mimics and will imitate voice and gesture perfectly.
